Specification	
Systems architecture	
the purpose of the CPU	
Von Neumann architecture:	
MAR (Memory Address Register)	
MDR (Memory Data Register)	
Program Counter	
Accumulator	
common CPU components and their function:	
ALU (Arithmetic Logic Unit)	
CU (Control Unit)	
Cache	
the function of the CPU as fetch and execute instructions stored in memory	
now common characteristics of CPUs affect their performance:	
clock speed	
cache size	
number of cores	
embedded systems:	
purpose of embedded systems	
examples of embedded systems.	
Memory	
the difference between RAM and ROM	
the purpose of ROM in a computer system	
the purpose of RAM in a computer system	
the need for virtual memory	
flash memory	
Storage	
the need for secondary storage	
data capacity and calculation of data capacity requirements	
common types of storage:	
optical	
magnetic	
solid state	
suitable storage devices and storage media for a given application, and the advantages and disadvantages of these, using characteristics:	
capacity	
speed	

portability
durability
reliability
cost
Wired and wireless networks
types of networks:
LAN (Local Area Network)
WAN (Wide Area Network)
factors that affect the performance of networks
the different roles of computers in a client-server and a peer-to-peer network
the hardware needed to connect stand-alone computers into a Local Area Network:
wireless access points
routers/switches
NIC (Network Interface Controller/Card)
transmission media
the internet as a worldwide collection of computer networks:
DNS (Domain Name Server)
hosting
the cloud
the concept of virtual networks
Network topologies, protocols and layers
star and mesh network topologies
Wifi:
frequency and channels
encryption
ethernet
the uses of IP addressing, MAC addressing, and protocols including:
TCP/IP (Transmission Control Protocol/Internet Protocol)
HTTP (Hyper Text Transfer Protocol)
HTTPS (Hyper Text Transfer Protocol Secure)
FTP (File Transfer Protocol)
POP (Post Office Protocol)
IMAP (Internet Message Access Protocol)
SMTP (Simple Mail Transfer Protocol)
the concept of layers
packet switching
System security

forms of attack
threats posed to networks:
malware
phishing
people as the 'weak point' in secure systems (social engineering)
brute force attacks
denial of service attacks
data interception and theft
the concept of SQL injection
poor network policy
identifying and preventing vulnerabilities:
penetration testing
network forensics
network policies
anti-malware software
firewalls
user access levels
passwords
encryption
Systems software
the purpose and functionality of systems software
operating systems:
user interface
memory management/multitasking
peripheral management and drivers
user management
file management
utility system software:
encryption software
defragmentation
data compression
the role and methods of backup:
full
incremental
Ethical, legal, cultural and environmental concerns
Ethical, legal, cultural and environmental concerns how to investigate and discuss Computer Science technologies while considering:

legal issues
cultural issues
environmental issues
privacy issues
how key stakeholders are affected by technologies
environmental impact of Computer Science
cultural implications of Computer Science
open source vs proprietary software
legislation relevant to Computer Science:
The Data Protection Act 1998
Computer Misuse Act 1990
Copyright Designs and Patents Act 1988
Creative Commons Licensing
Freedom of Information Act 2000.
Algorithms
computational thinking:
abstraction
decomposition
algorithmic thinking
standard searching algorithms:
binary search
linear search
standard sorting algorithms:
bubble sort
merge sort
insertion sort
how to produce algorithms using:
pseudocode
using flow diagrams
interpret, correct or complete algorithms
Programming techniques
the use of variables, constants, operators, inputs, outputs and assignments
the use of the three basic programming constructs used to control the flow of a program:
sequence
selection
iteration (count and condition controlled loops)
the use of basic string manipulation

the use of basic file handling operations:
open
read
write
close
the use of records to store data
the use of SQL to search for data
the use of arrays (or equivalent) when solving problems, including both one and two dimensional arrays
how to use sub programs (functions and procedures) to produce structured code
the use of data types:
integer
real
Boolean
character and string
casting
the common arithmetic operators
the common Boolean operators
Producing robust programs
defensive design considerations:
defensive design considerations: input sanitisation/validation
input sanitisation/validation
input sanitisation/validation planning for contingencies
input sanitisation/validation planning for contingencies anticipating misuse
input sanitisation/validation planning for contingencies anticipating misuse authentication
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability:
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing:
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative final/terminal
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative final/terminal how to identify syntax and logic errors
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative final/terminal how to identify syntax and logic errors selecting and using suitable test data
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative final/terminal how to identify syntax and logic errors selecting and using suitable test data Computational logic
input sanitisation/validation planning for contingencies anticipating misuse authentication maintainability: comments indentation the purpose of testing types of testing: iterative final/terminal how to identify syntax and logic errors selecting and using suitable test data Computational logic why data is represented in computer systems in binary form

applying logical operators in appropriate truth tables to solve problems
applying computing-related mathematics:
+
_
/
*
Exponentiation (^)
MOD
DIV
Translators and facilities of languages
characteristics and purpose of different levels of programming language, including low level languages
the purpose of translators
the characteristics of an assembler, a compiler and an interpreter
common tools and facilities available in an integrated development environment (IDE):
editors
error diagnostics
run-time environment
translators
Data representation
Data representation Units
Units
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer.
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa how to convert from binary to hexadecimal equivalents and vice versa
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa how to convert from binary to hexadecimal equivalents and vice versa check digits.
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa how to convert from binary to hexadecimal equivalents and vice versa check digits. Characters
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa how to convert from binary to hexadecimal equivalents and vice versa check digits. Characters the use of binary codes to represent characters
Units bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte how data needs to be converted into a binary format to be processed by a computer. Numbers how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa how to add two 8 bit binary integers and explain overflow errors which may occur binary shifts how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa how to convert from binary to hexadecimal equivalents and vice versa check digits. Characters the use of binary codes to represent characters the term 'character-set' the relationship between the number of bits per character in a character set and the number of

metadata included in the file

the effect of colour depth and resolution on the size of an image file.

Sound

how sound can be sampled and stored in digital form

how sampling intervals and other factors affect the size of a sound file and the quality of its playback:

sample size

bit rate

sampling frequency

Compression

need for compression

types of compression:

lossy

lossless
